

Investigation of the role of OxPLs in a 3D metastasis model

Start and end date: 01/06/2023 to 30/06/2023

Dr. Kata Juhasz

It was a great opportunity provided by COST to spend a month at Prof. Valery Bochkov's lab, where I performed optimization experiments to set up a novel 3D model to study effect of OxPLs on metastasis. It was a pleasure to have scientific conversations in the inspiring milieu of the Institute of Pharmaceutical Chemistry, while hiking with the host team in the amazing Alps. Graz is a green town with parks and less traffic- at least in June-, really a great place to visit. I was glad to have a bicycle with me for riding from the accommodation to the university. I look forward to further collaborative work with the Bochkov lab.

Regards,

Kata
