

GC-MS analysis of various fungal-based sterols

The STSM stay completed thanks to a funding provided by EpiLipidNET COST action enabled me to visit the lipid research team at the Slovak University of Technology in beautiful Bratislava for a few days. During the research stay, thanks to the cooperation with the host institution, new knowledge and analytical techniques were opened to me, which took my knowledge of lipidomics and analytical techniques to the next level. It was wonderful to be at least for a several days a part of inspiring conversations, sometimes focused not only on the scientific and research field, and I firmly believe that this cooperation was not our last, but the opposite - that it opened many opportunities for further mutual projects. The university located in the heart of the capital city of Slovakia was really a wonderful home for me for a few days. Thanks to funding from the COST association, I could not just meet elite scientists and perform high-quality research, but what is the most important - I could feel at home there, like among the best friends.
