

The training carried out during this STSM at University of Aveiro (UAVR) represented for me an excellent opportunity to deepen my knowledge on lipidomics; thanks to the expertise of the Lipidomics Lab and the scientific supervisor Prof. Rosario Domingues, I enhanced my skills and specialistic knowhow on phospholipidomics, with with a particular focus on sample processing, normalization and MS-based analytical techniques useful for the detection and identification of different classes of phospholipids.

This STSM was also an occasion to establish networking, future collaborations and bilateral training activities between University of Perugia and UAVR.
