

During my scientific mission at the Proteomics and Metabolomics Core Facility at Helmholtz Munich, in the laboratory of Dr. Michael Witting, I was able to learn how to determine the double bond position of glycerophospholipids and sphingomyelins using the ZenoTOF 7600. It has been an incredible opportunity to improve my technical skills and the knowledge of structural elucidation surrounded by a team of experts who helped me during my stay.

Beyond the lab, I also made sure to explore Munich –culture, historical sites and local cuisine- and the amazing surrounding lakes.

The experience was enriched by the diverse people I met, who shared their knowledges and stories, making the internship a journey of both profesional and personal growth.
